AB The title seed dressing containing pesticides, nutrients, and growth regulators is obtained by the addition of polyacrylamide, hydrolyzed polyacrylamide, hydrolyzed polyacrylonitrile, acrylamide copolymers, poly(vinyl alc.), or poly(vinyl acetate) 0.1-50 wt% aqueous suspension at 0.01-10.0 wt% of the treated seeds, lignosulfonates, molasses, or brown coal dust 0.1-5.0 wt%, and HCHO, epoxides, or Ca salts at 0.01-1.0 of the amount of the polymer material. The dressing is easily applied by spraying, forms a strong film, and has low phytotoxicity. Onion seeds were treated with a dressing prepared by the addition of polyacrylamide (average mol. weight 2.5×10^6) 5% aqueous suspension, at 0.6 wt% of the weight of the seeds, to the com. seed dressing prepn. Oftanol T and Rowral (5 wt% each of the weight of the seeds). The germination capacity of the seeds was 78.5%.

ST seed dressing polyacrylamide polyacrylonitrile; pesticide growth regulator seed dressing
